DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention: the subspecies wherein the shocking energy is approximately 25 J to 50 J; the subspecies wherein the shocking energy is approximately 50 J to 75 J; the subspecies wherein the shocking energy is approximately 75 J to 100 J; the subspecies wherein the shocking energy is approximately 100 J to 125 J; the subspecies wherein the shocking energy is approximately 125 J to 150 J; the subspecies wherein the electrode is substantially ellipsoidal in shape; the subspecies wherein the electrode is substantially thumbnail shape; the subspecies wherein the electrode is substantially circular in shape; the subspecies wherein the electrode is substantially square in shape; the subspecies wherein the electrode is substantially rectangular in shape; the subspecies wherein the electrode is substantially triangular in shape; the subspecies wherein the electrode area is between approximately 750 and 1000 square millimeters; the subspecies wherein the electrode area is between approximately 500 and 750 square millimeters; the subspecies wherein the electrode area is between approximately 250 and 500 square millimeters; the subspecies wherein the electrode area is between approximately 100 and 250 square millimeters.

2. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 61, 121 and 181 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. A variety of other species has been noted concerning for example the location of the electrode with respect to the body, but the examiner is not requiring election between these species since they are not considered to be patentably distinct.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
